

## Overview

The Wave2Wave 77-Q010S4 is a high-performance QSFP+ SR4 optical transceiver engineered for short-reach, multi-lane data communication and high-density interconnects. It delivers four parallel lanes of 10.3125Gbps for an aggregated bandwidth of 40Gbps, operating at 850nm over OM3 fiber distances up to 300m.

The module features a 38-contact edge connector and a 12-fiber MTP/MPO optical interface. An onboard EEPROM provides real-time monitoring and configuration access through a standard 2-wire QSFP management interface.

### Features and Benefits

- Hot-pluggable QSFP+ MSA module with compact MPO interface
- Four 10.3125Gbps lanes supporting up to 300m reach on OM3 fiber
- Integrated 2-wire Digital Diagnostics Monitoring for real-time insights
- Low-power design operating under 1.5W for high-density deployments
- Wide operating case temperature range: 0°C to +70°C

### Applications

- High-density datacenter and telecom interconnects
- 40GBASE-SR4 Ethernet
- InfiniBand SDR, DDR, and QDR systems

## NOTES:

1. GND is the symbol for signal and supply (power) common for the QSFP+ module. All the common within the QSFP+ module and all module voltages are referenced to this potential unless otherwise noted. Connect these directly to the host board signal-common ground plane.
2. Vcc Rx, Vcc1 and Vcc Tx are the receiver and transmitter power supplies and shall be applied concurrently. Recommended host board power supply filtering is shown in Figure 7. Vcc Rx Vcc1 and VccTx may be internally connected within the QSFP+ module in any combination. The connector pins are each rated for a maximum current of 500 mA.

## Optical Interface

Figure 2. Optical lane assignment (front view of MPO receptacle)

The 4 transmit and 4 receive optical lanes of the SR4 transceiver take the ordered positions as depicted in 12-fiber MPO channel assignment picture shown in Figure 2.
